

Yogendra Industries – Requirements Gathering Notes

Project Scope

Build a complete e-commerce storefront, admin panel, billing system, inventory management system, analytics dashboard, and operational automations for Yogendra Industries.

1. Inventory Management

Dead Inventory Tracking

Need a clear definition of "dead inventory."

Possible criteria:

- Products not sold/moved in the last X days (e.g., 30 days)
- Products with only 1–2 pieces remaining in stock
- Final criteria to be defined with client

Dashboard Visibility

Show:

- Dead inventory
 - Inactive inventory
 - Low stock inventory
-

Product Categories During Inventory Upload

Before uploading inventory, user should select a category.

Example:

- Necklace
- Bracelet
- Anklet

Once selected:

- All uploaded products automatically go under that category
 - Prevents misclassification of visually similar products
-

Bulk Uploads

Client wants:

- Demonstration of bulk upload workflow
- Understanding of manual vs automated effort

Important because:

- 10,000+ SKUs
- 20–80 categories

Need scalable import process.

Product Types

Simple Products

- Color variants not displayed separately
- Customer sees product only

Configurable Products

- Multiple color variants displayed separately
- Customer can choose color variation

Examples:

- Same design available in multiple colors
-

2. Product Pages & Catalog

Multiple Product Images

Each product should support multiple images.

Examples:

- Product on model
- Flat lay image
- Close-up image
- Alternate angles

Displayed as gallery on product page.

Automated SEO

For every product:

- Auto-generated SEO metadata
- Auto-generated descriptions
- SEO keyword support

Keywords should be configurable and inserted into product descriptions.

Abandoned Cart Tracking

Need section showing:

- Abandoned carts
- Products added but not purchased

Purpose:

- Analyze customer behavior
 - Identify weak-performing products
-

3. User Management & Security

Role-Based Access Control (RBAC)

Owner wants highly customizable permissions.

Inspiration:

- Discord permission system

Requirements:

- Create custom roles
- Assign permissions to roles
- Assign users to roles

Examples:

- Product editing
 - Inventory management
 - Billing access
 - Analytics access
 - User management
-

Two-Factor Approval System

Certain sensitive actions should require owner approval.

Example:

- Editing product descriptions
- Editing important product information

Flow: 1. Staff initiates action 2. Approval request generated 3. Owner receives verification request 4. Owner shares/approves OTP 5. Action completed

4. Pricing System

Need support for:

Wholesale Pricing

Based on:

- Base wholesale price

Retail/D2C Pricing

Pricing formula supplied by client.

System should:

- Automatically calculate selling prices
- Support different pricing structures

Need final pricing formulas from client.

5. Billing & Accounting System

Purchase Module

Requirements:

Supplier Database

Organized by location.

Examples:

- Mumbai suppliers
 - Kolkata suppliers
 - Delhi suppliers
-

Purchase Records

Maintain:

- Purchase bills
 - Purchase ledger
 - Supplier history
-

Financial Records

Track:

- Cash balance
 - Bank balance
 - Ledger entries
-

Purchase Returns

Support:

- Returned inventory
 - Purchase return records
-

Sales Module

POS (Point of Sale)

Need:

- Daily sales tracking
 - POS billing
-

Sales Returns

Support:

- Customer returns
- Return tracking

Estimates / Quotations

Requirements:

- Create estimate for customer
- Customer may or may not purchase later

Need:

- Estimate management section
 - Estimate-to-order conversion capability
-

Inventory Return Reason Tracking

Scenario:

- Product reserved/checked out
- Customer does not purchase
- Staff returns product to inventory

Need:

- Return reason category

Example: "Customer checkout cancelled / purchase not completed"

Maintain audit trail.

Invoice System

Need:

- Share invoice format with client
- Gather feedback before finalization

Invoice format still pending approval.

6. Logistics & Shipping

Delivery Partner

Preferred integration:

- Delhivery

Client prefers this over Shiprocket.

Need integration feasibility review.

7. Social Media & Marketing

Social Media Publishing

Requirements:

- Upload image
- Upload description

System should:

- Generate SEO content
- Publish to social channels

Platforms:

- Instagram
 - Facebook
-

Instagram Content Embedding

Reference Website:

- Shopping Tree

Requirement:

- Pull Instagram content
- Display reels/posts on website

Likely through third-party integration.

Customer Feedback Collection

After order completion:

Automatically send:

- Feedback form
 - Via WhatsApp
-

8. Analytics & Reporting

Google Analytics Integration

Need:

- Website analytics visibility
 - Traffic insights
-

Business Reports

Support custom date ranges.

Examples:

- July 1 – August 1
- July 13 – August 26

Reports should include:

- Revenue
 - Orders
 - Product performance
 - Inventory insights
-

Dashboard Requirements

Owner dashboard should display:

Product Metrics

- New products created
- Inactive products
- Total products

Category Metrics

- Newly created categories

Sales Metrics

- Total orders
- Revenue

Inventory Metrics

- Dead inventory

- Low stock inventory

Business Insights

- Overall performance summary
-

9. Wholesale vs Retail Product Display Logic

Requirement:

If SKU has multiple color variants:

Retail View

Show:

- All color variants

Wholesale View

May not show individual colors

Reason:

- Cost/value alignment
- Different purchasing behavior

Need configurable visibility rules.

10. Purchase Bill Handling

Current challenge:

Supplier SKU names differ from internal inventory SKU names.

Client wants:

- Ability to manually adjust purchase bill mappings

Need:

- Semi-automated mapping process
 - Manual override support
-

11. Demo Requirements

Client will provide:

- 20–30 sample SKUs

Need demo showing:

1. Inventory upload
 2. Category assignment
 3. Product creation
 4. Product page generation
 5. SEO generation
 6. Billing flow
 7. Sales flow
 8. Dashboard reporting
 9. End-to-end workflow
-

UI References

Billing UI

Reference:

- Vyapar App

Client prefers a similar workflow and interface style.

Permission System

Reference:

- Discord role permissions

Social Proof Integration

Reference:

- Shopping Tree website
